#### NOTE 1 Summary of Significant Accounting Policies and Going Concern

#### Accounting Practices

The financial statements of ANPAC Louisiana Insurance Company ("the Company") are presented on the basis of accounting practices prescribed or permitted by the Louisiana Department of Insurance

The Louisiana Department of Insurance recognizes only statutory accounting practices prescribed or permitted by the state of Louisiana for determining and reporting the financial condition and results of operations of an insurance company, for determining its solvency under the Louisiana Insurance Law. The National Association of Insurance Commissioners' (NAIC) Accounting Practices and Procedures Manual ("NAIC SAP") has been adopted as a component of prescribed or permitted practices by the state of Louisiana. The state has implemented and adopted certain exceptions to the prescribed or permitted accounting practices found in NAIC SAP and the Commissioner of Insurance has the right to permit other specific practices that deviate from prescribed practices (permitted practice). As of the date of this report, the Company has not implemented any such exceptions, has not requested permission for a permitted practice, nor been directed by the state of Louisiana to implement any accounting practice unique to the Company.

The Louisiana Department of Insurance has adopted a prescribed practice that differs from NAIC SAP, whereby the Company is required to non-admit premium receivables which exceed the unearned premium reserve on a per policy basis regardless of age. In NAIC SAP, premium receivables are non-admitted if they are greater than ninety days past due. The effect to the Company of complying with this prescribed practice is disclosed in the table below.

В.

Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability. A fair value hierarchy is used to determine fair value based on a hypothetical transaction at the measurement date from the perspective of a market participant. An asset or liability's classification within the fair value hierarchy is based on the lowest level of significant input to its valuation. The input levels are defined as follows:

Level 1 - Unadjusted quoted prices in active markets for identical assets or liabilities. The Company defines active markets based on average trading volume for equity securities. The size of the bid/ask spread is used as an indicator of market activity for fixed maturity securities.

Level 2 - Quoted prices in markets that are not active or inputs that are observable directly or indirectly. Level 2 inputs include quoted prices for similar assets or liabilities other than quoted prices in Level 1; quoted prices in markets that are not active; or other inputs that are observable or can be derived principally from or corroborated by observable market data for substantially the full term of the assets or liabilities.

Level 3 - Unobservable inputs that are supported by little or no market activity and are significant to the fair value of the assets or liabilities. Unobservable inputs reflect the Company's own assumptions about the assumptions that market participants would use in pricing the asset or liability. Level 3 assets and liabilities include financial instruments whose values are determined using pricing models and third-party evaluation, as well as instruments for which the determination of fair value requires significant management judgment or estimation.

The Company has evaluated the various types of securities in its investment portfolio to determine an appropriate fair value hierarchy level based upon trading activity and the observability of market inputs. Based on the results of this evaluation and investment class analysis, each price was classified into Level 1, 2, or 3.

Equity and fixed income securities are priced by independent pricing services. The pricing service utilizes market quotations for fixed maturity securities that have quoted prices in active markets. Since fixed maturities generally do not trade on a daily basis, the pricing service prepares estimates of fair value measurements for these securities using its proprietary pricing applications, which include available relevant market information, benchmark curves, benchmarking of like securities, sector groupings and matrix pricing. Additionally, the pricing service uses an Option Adjusted Spread model to develop prepayment and interest rate scenarios

The pricing service evaluates each asset class based on relevant market information, relevant credit information, perceived market movements and sector news. The market inputs utilized in the pricing evaluation, listed in the approximate order of priority, include benchmark yields, reported trades, broker/dealer quotes, issuer spreads, two-sided markets, benchmark securities, bids, offers, reference data, and economic events. The extent of the use of each market input depends on the asset class and the market conditions. Depending on the security, the priority of the use of inputs may change or some market inputs may not be relevant. For some securities additional inputs may be necessary.

The Company has reviewed the inputs and methodology used by the pricing service and the techniques applied by the pricing service to produce quotes that represent the fair value of a specific security. The review of the pricing service's methodology confirms the service is utilizing information from organized transactions or a technique that represents a market participant's assumptions. The Company does not adjust quotes received by the pricing service.

The pricing service utilized by the Company has indicated that they will only produce an estimate of fair value if there is objectively verifiable information available. If the pricing service discontinues pricing an investment, the Company would be required to produce an estimate of fair value using some of the same methodologies as the pricing service, but would have to make assumptions for market-based inputs that are unavailable due to market conditions.

The fair value estimates of most fixed maturity investments including municipal bonds are based on observable market information rather than market quotes. Accordingly, the estimates of fair value for such fixed maturities provided by the pricing service are included in the amount disclosed in Level 2 of the hierarchy.

Additionally, the Company holds a small amount of fixed maturities that have characteristics that make them unsuitable for matrix pricing. For these fixed securities, a quote from a broker (typically a market maker) is obtained. Due to the disclaimers on the quotes that indicate that the price is indicative only, the Company includes these fair value estimates in Level 3. The pricing of certain private placement debt also includes significant non-observable inputs, the internally determined credit rating of the security and an externally provided credit spread, and are classified in Level 3

For public common stocks, the Company receives prices from a nationally recognized pricing service that are based on observable market transactions and these securities are disclosed in Level 1. For certain preferred stock held, current market quotes in active markets are unavailable. In these instances, the Company receives an estimate of fair value from the pricing service that provides fair value estimates for the fixed maturity securities. The service utilizes some of the same methodologies to price the preferred stocks as it does for the fixed maturities. These estimates for equity securities are disclosed in Level 2.
